Expectations for authorship for MRI Facility personnel will be discussed with initial contact. While authorship is not required and will often be inappropriate for personnel providing research input to the project (particularly assisting in adapting work to the MRI environment), if there is significant intellectual and/or organizational effort (i.e., serving as Primary Operator throughout the data collection) on the part of MRI Facility personnel to the work described in the manuscript, authorship is warranted and expected. For example, expert data analysis from MRI Facility personnel that is required in support of claims in a manuscript or patent warrant authorship. It will be made clear to investigators utilizing the MRI Facility that the recovery of MRI Facility expenses through billing does not exclude the possibility for authorship for research personnel. Similarly, authorship does not substitute for payment of MRI Facility expenses for services rendered.

In publications that describe research that took place at the Purdue MRI Facility, authors should identify such as the location of the 3T MRI system utilized, or acknowledge the use of the Facility and the Weldon School of Biomedical Engineering: "The author(s) acknowledge the use of the Purdue MRI Facility, administered by the Weldon School of Biomedical Engineering, a core facility of the NIH-funded Indiana Clinical & Translational Science Institute."
